Education

Maharishi Dayanand University

Bachelor of Technology in Computer Science

June 2016 – Sep 2020

Rohtak, Haryana

Technical Skills

Languages: Python, SQL, JavaScript (Jquery), HTML5, CSS3

Frameworks: Django, Django REST Framework, Pandas, NumPy, Bootstrap

AI/GenAI: LLMs (Gemini, Preplexity, GPT), Prompt Engineering

Databases/Tools: MySQL, PostgreSQL, Linux, Git, Github, Postman, VS Code, Confluence/Jira

Experience

Tata Consultancy Services

June 2023 – Present

System Engineer

Gurugram, Haryana

- Developed Python automation scripts to streamline Autosys job creation by ingesting Excel templates using **Pandas** and **NumPy**, performing required transformations and validations, and generating deployment-ready output files for JIL validation across environments.
- Built scalable back-end services using **Python**, **Django**, and **PostgreSQL**, implementing **secure authentication**, scheduled **cron jobs**, optimized data pipelines, and integrating **Twilio**, **SMTP**, and bulk messaging for automated communication workflows.
- Built multiple Python utilities for **data validation**, **data conversion**, filtering, and rule-based modifications, reducing manual effort and ensuring accurate, repeatable, audit-friendly workflows.
- Handled ETL-style extraction and transformation tasks, processing CML files, SQL datasets, and configuring database workflows; used **SQL Developer** for complex queries and **SecureCRT** for managing Unix-based file systems.

Clavax Technologies Private Limited

July 2021 – May 2023

Associate Level L1

Gurugram, Haryana

- Developed a comprehensive **Pharmacy HRMS** with patient/doctor workflows, **WebCamJS** photo capture, and **AWS S3 (boto3)** uploads; engineered responsive front-end modules using **JavaScript**, **jQuery**, **AJAX**, and **SweetAlert** with advanced validations and real-time UI feedback.
- Improved company websites by managing **form processing**, client-side validations, responsive UI behavior, and seamless **AJAX/API** integrations to ensure consistent performance and smooth user interactions.
- Handled API-driven **Simplify** modules with dynamic data rendering, enhanced UX via structured **CSS**, used **Pandas** for CSV/Excel ingestion, implemented efficient pagination with **Django Paginator**, and delivered stable, production-grade releases.

Krayons Convergence Private Limited

Jan 2021 – June 2021

Web Developer

New Delhi, Delhi

- Developed high-performance, responsive UIs using HTML5, CSS3, JavaScript and Bootstrap, delivering scalable, production-ready experiences with improved accessibility, usability, and maintainability through reusable components and optimized engineering practices.
- Designed and implemented modular PHP back-end components, enabling efficient data handling, reliable server-side workflows, and seamless user interactions while ensuring a scalable and high-performance application architecture.

Projects

AI-Based Github-Jira Integration | Python, Django, Gemini AI, Github, Confluence/Jira

- Engineered an advanced Jira-GitHub automation system using Python and Django, enabling AI-driven ticket creation, real-time status syncing, and commit-based workflow updates powered by Gemini 1.5 Flash.
- Built intelligent code-analysis and auto-documentation pipelines that use Gemini to summarize pull requests and generate issue descriptions.
- Deployed the solution on GitHub with CI/CD automation, secure API authentication, and modular Django architecture.

Resume Analyzer Web Application | Python, Django, Perplexity LLM, Spacy, PyPDF2

- Developed AI-driven Resume Analyzer using LLM to process resumes, extract data, and assess ATS readiness.
- Delivered secure Django workflow supporting bulk uploads, real-time scoring, correction suggestions, and exportable Excel reports.

Additional Projects: Built and enhanced dynamic and static web applications for healthcare, technology, and e-commerce industries, ensuring optimized performance, clean UI/UX, and production-ready deployments.
